1.1 Ejercicio 1

Illustrate the validity of the derivation by comparing the empirical distribution obtained in a simulation of the Poisson process and the theoretical distribution of P [N (t) = n] given by Eq. (4) for the values = 10, t = 2.

- 1. A Poisson process with rate λ can be defined as a counting process $\{N(t); t \geq 0\}$ with the following properties
 - (a) N(0) = 0.
 - (b) N(t) has independent and stationary increments.
 - (c) Let $\Delta N(t) = N(t + \Delta t) N(t)$ with $\Delta t \to 0^+$. The following relations hold:

$$\mathbb{P}\left[\Delta N(t) = 0\right] = 1 - \lambda \Delta t + o(\Delta t) \tag{1}$$

$$\mathbb{P}\left[\Delta N(t) = 1\right] = \lambda \Delta t + o(\Delta t) \tag{2}$$

$$\mathbb{P}\left[\Delta N(t) \ge 2\right] = o(\Delta t). \tag{3}$$

From this definition show that

$$\mathbb{P}[N(t) = n] = \frac{1}{n!} \lambda^n t^n e^{-\lambda t}.$$
 (4)

To this end, set up a system of differential equations for the quantities $\mathbb{P}[N(t)=0]$, and $\mathbb{P}[N(t)=n]$ with $n \geq 1$. Then verify that Eq. (4) satisfies the differential equations derived.

For instance, the differential equation for $\mathbb{P}[N(t)=0]$ can be derived from the fact that

$$\mathbb{P}\left[N(t+\Delta t)=0\right] = \mathbb{P}\left[N(t)=0\right] \mathbb{P}\left[\Delta N(t)=0\right] \tag{5}$$

Using Eq. (1), we obtain

$$\mathbb{P}\left[N(t+\Delta t)=0\right] = \mathbb{P}\left[N(t)=0\right] - \mathbb{P}\left[N(t)=0\right] \lambda \Delta t + o(\Delta t). \tag{6}$$

The corresponding differential equation is obtained in the limit $\Delta t \to 0^+$

$$\frac{d}{dt}\mathbb{P}\left[N(t) = 0\right] = -\lambda\mathbb{P}\left[N(t) = 0\right]. \tag{7}$$

The solution of this differential equation for the initial condition $\mathbb{P}[N(0) = 0] = 1$ is

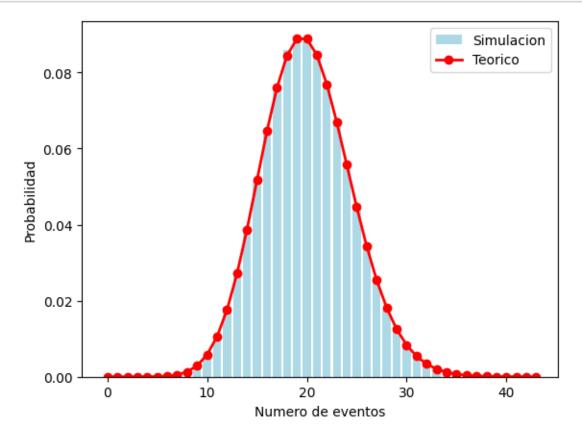

$$\mathbb{P}\left[N(t) = 0\right] = e^{-\lambda t}.\tag{8}$$

Illustrate the validity of the derivation by comparing the empirical distribution obtained in a simulation of the Poisson process and the theoretical distribution of $\mathbb{P}\left[N(t)=n\right]$ given by Eq. (4) for the values $\lambda=10$, t=2.

$$P[N(t+\Delta t) = n] = P[N(t) = n] P[DN(t) = 0] + P[N(t) = n-1) P[DN(t) = 1] + P[N(b) = n-2] \cdot P[DN(b) = 2] + ... = 0 (Ab)$$

$$= P[N(t)=n] \cdot (1-\lambda Dt + o(Dt)) + P[N(t)=n-1] \cdot (\lambda Dt + o(Dt)) + o(\Delta t)$$

```
[22]: lam = 10
      t = 2
      N = 100000
      # Simulacion
      simulation = np.random.poisson(lam * t, N)
      # Valores teoricos
      n_values = np.arange(0, max(simulation) + 1)
      theoretical = poisson.pmf(n_values, lam * t)
      # Histograma
      _ = plt.hist(simulation, bins=n_values - 0.5, density=True,
                   rwidth=0.8, color='lightblue', label='Simulacion')
      # Grafico teorico
      _ = plt.plot(n_values, theoretical, 'ro-', linewidth=2, label='Teorico')
      plt.xlabel('Numero de eventos')
      plt.ylabel('Probabilidad')
      plt.legend()
      plt.show()
```

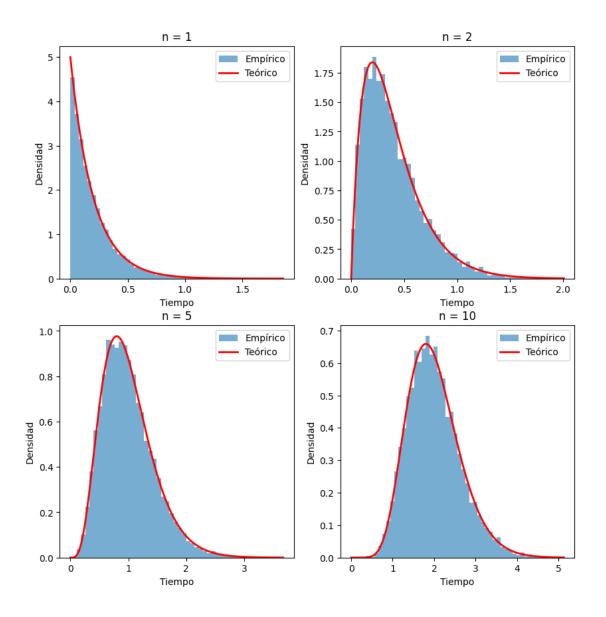

Como se puede ver en la imagen, la distribución obtenida en la simulación es muy similar a la distribución teórica.

1.2 Ejercicio 2

Simulate a Poisson process with $\lambda = 5.0$. From these simulations show for different values of n = 1, 2, 5, 10 that the probability density of the nth arrival is

$$f_{S_n}(t) = \frac{\lambda^n t^{n-1} e^{-\lambda t}}{(n-1)!}$$

```
[23]: lam = 5.0
      N = 10000
      n_{values} = np.array([1, 2, 5, 10])
      # Diccionario de los valores n-simos
      event_times = {n: [] for n in n_values}
      # Simulacion
      for _ in range(N):
          interarrival_times = np.random.exponential(1 / lam, max(n_values))
          arrival_times = np.cumsum(interarrival_times)
          for n in n_values:
              event_times[n].append(arrival_times[n - 1])
      # Histograma
      fig, axs = plt.subplots(2, 2, figsize=(10, 10))
      axs = axs.ravel()
      for i, n in enumerate(n_values):
          axs[i].hist(event_times[n], bins=50, density=True, alpha=0.6,
       ⇔label="Empirico")
          # Valores teoricos
          t_values = np.linspace(0, max(event_times[n]), 1000)
          theoretical_density = (lam ** n) * (t_values ** (n - 1)) * np.exp(-lam *_
       →t_values) / math.factorial(n - 1)
          axs[i].plot(t_values, theoretical_density, 'r-', linewidth=2,_
       ⇔label="Teórico")
          axs[i].set_title(f'n = {n}')
          axs[i].set_xlabel('Tiempo')
          axs[i].set_ylabel('Densidad')
          axs[i].legend()
```

1.3 Ejercicio 3

3. Assume that we have a sample $\{U_i\}_{i=1}^n$ of n iid U[0,t] random variables. The probability density of the order statistics $\{U_{(1)} < U_{(2)} < \ldots < U_{(n)}\}$ is

$$f_{\{U_{(i)}\}_{i=1}^n}(\{u_{(i)}\}_{i=1}^n) = \frac{n!}{t^n}.$$

Let $\{N(t); t \geq 0\}$ be a Poisson process with rate λ . Show that conditioned on N(t) = n, the distribution of arrival times $\{0 < S_1 < S_2 < \ldots < S_n\}$ coincides with the distribution of order statistics of n iid U[0,t] random variables

$$f_{\{S_{(i)}\}_{i=1}^{n}|N(t)}\left(\{u_{(i)}\}_{i=1}^{n}|n\right) = \frac{n!}{t^{n}}.$$

• Use Bayes theorem to calculate the density $f_{\{S_i\}_{i=1}^{n+1}|N(t)}\left(\{s_i\}_{i=1}^{n+1}|n\right)$

$$\begin{cases} \{S_{i}\}_{i=1}^{n+1} | \{V(i)\} & \{S_{i}\}_{i=1}^{n+1} | I_{n}\} = \frac{\{(n|\{S_{i}\}_{i=1}^{n+1}\} \cdot \{\{S_{i}\}_{i=1}^{n+1}\}\}}{\{(n)\}} \end{cases}$$

• Use the fact that N(t) = n if and only if $s_n \le t < s_{n+1}$

$$f_{N(t)|\{S_i\}_{i=1}^{n+1}} \left(n | \left\{ s_i \right\}_{i=1}^{n+1} \right) = \quad \begin{array}{cc} 1 & s_n \leq t < s_{n+1} \\ 0 & \text{otherwise}. \end{array}$$

ullet Focus on the the case $s_n \leq t < s_{n+1}$.

• Use the fact that

$$f_{\left\{S_{i}\right\}_{i=1}^{n+1}\mid N(t)}\left(\left\{s_{i}\right\}_{i=1}^{n+1}\mid n\right)=f_{S_{n+1}\mid\left\{S_{i}\right\}_{i=1}^{n},N(t)}\left(s_{n+1}\mid\left\{s_{i}\right\}_{i=1}^{n},n\right)f_{\left\{S_{i}\right\}_{i=1}^{n}\mid N(t)}\left(\left\{s_{i}\right\}_{i=1}^{n}\mid n\right)$$

• Use the memoryless property for $s_{n+1} > t$

$$f_{S_{n+1}|\{S_i\}_{i=1}^n, N(t)}(s_{n+1}|\{s_i\}_{i=1}^n, n) = f_{S_{n+1}|N(t)}(s_{n+1}|n)$$

$$\begin{cases}
(4s; 1_{i=1}^{n+1} | n) = \begin{cases} (s_{n+1} | n) \\ (4s; 1_{i=1}^{n} | n) \end{cases} = \begin{cases} (4s; 1_{i=1}^{n} | n) \\ (4s; 1_{i=1}^{n} | n) \end{cases} = \begin{cases} (4s; 1_{i=1}^{n} | n) \\ (4s; 1_{i=1}^{n} | n) \end{cases} = \begin{cases} (4s; 1_{i=1}^{n} | n) \\ (4s; 1_{i=1}^{n} | n) \end{cases} = \begin{cases} (4s; 1_{i=1}^{n} | n) \\ (4s; 1_{i=1}^{n} | n) \end{cases} = \begin{cases} (4s; 1_{i=1}^{n} | n) \\ (4s; 1_{i=1}^{n} | n) \end{cases} = \begin{cases} (4s; 1_{i=1}^{n} | n) \\ (4s; 1_{i=1}^{n} | n) \end{cases} = \begin{cases} (4s; 1_{i=1}^{n} | n) \\ (4s; 1_{i=1}^{n} | n) \end{cases} = \begin{cases} (4s; 1_{i=1}^{n} | n) \\ (4s; 1_{i=1}^{n} | n) \end{cases} = \begin{cases} (4s; 1_{i=1}^{n} | n) \\ (4s; 1_{i=1}^{n} | n) \end{cases} = \begin{cases} (4s; 1_{i=1}^{n} | n) \\ (4s; 1_{i=1}^{n} | n) \end{cases} = \begin{cases} (4s; 1_{i=1}^{n} | n) \\ (4s; 1_{i=1}^{n} | n) \end{cases} = \begin{cases} (4s; 1_{i=1}^{n} | n) \\ (4s; 1_{i=1}^{n} | n) \end{cases} = \begin{cases} (4s; 1_{i=1}^{n} | n) \\ (4s; 1_{i=1}^{n} | n) \end{cases} = \begin{cases} (4s; 1_{i=1}^{n} | n) \\ (4s; 1_{i=1}^{n} | n) \end{cases} = \begin{cases} (4s; 1_{i=1}^{n} | n) \\ (4s; 1_{i=1}^{n} | n) \end{cases} = \begin{cases} (4s; 1_{i=1}^{n} | n) \\ (4s; 1_{i=1}^{n} | n) \end{cases} = \begin{cases} (4s; 1_{i=1}^{n} | n) \\ (4s; 1_{i=1}^{n} | n) \end{cases} = \begin{cases} (4s; 1_{i=1}^{n} | n) \\ (4s; 1_{i=1}^{n} | n) \end{cases} = \begin{cases} (4s; 1_{i=1}^{n} | n) \\ (4s; 1_{i=1}^{n} | n) \end{cases} = \begin{cases} (4s; 1_{i=1}^{n} | n) \\ (4s; 1_{i=1}^{n} | n) \end{cases} = \begin{cases} (4s; 1_{i=1}^{n} | n) \\ (4s; 1_{i=1}^{n} | n) \end{cases} = \begin{cases} (4s; 1_{i=1}^{n} | n) \\ (4s; 1_{i=1}^{n} | n) \end{cases} = \begin{cases} (4s; 1_{i=1}^{n} | n) \\ (4s; 1_{i=1}^{n} | n) \end{cases} = \begin{cases} (4s; 1_{i=1}^{n} | n) \\ (4s; 1_{i=1}^{n} | n) \end{cases} = \begin{cases} (4s; 1_{i=1}^{n} | n) \\ (4s; 1_{i=1}^{n} | n) \end{cases} = \begin{cases} (4s; 1_{i=1}^{n} | n) \\ (4s; 1_{i=1}^{n} | n) \end{cases} = \begin{cases} (4s; 1_{i=1}^{n} | n) \\ (4s; 1_{i=1}^{n} | n) \end{cases} = \begin{cases} (4s; 1_{i=1}^{n} | n) \\ (4s; 1_{i=1}^{n} | n) \end{cases} = \begin{cases} (4s; 1_{i=1}^{n} | n) \\ (4s; 1_{i=1}^{n} | n) \end{cases} = \begin{cases} (4s; 1_{i=1}^{n} | n) \\ (4s; 1_{i=1}^{n} | n) \end{cases} = \begin{cases} (4s; 1_{i=1}^{n} | n) \\ (4s; 1_{i=1}^{n} | n) \end{cases} = \begin{cases} (4s; 1_{i=1}^{n} | n) \\ (4s; 1_{i=1}^{n} | n) \end{cases} = \begin{cases} (4s; 1_{i=1}^{n} | n) \\ (4s; 1_{i=1}^{n} | n) \end{cases} = \begin{cases} (4s; 1_{i=1}^{n} | n) \\ (4s; 1_{i=1}^{n} | n) \end{cases} = \begin{cases} (4s; 1_{i=1}^{n} | n) \\ (4s; 1_{i=1}^{n} | n) \end{cases} = \begin{cases} (4s; 1_{i=1}^{n} | n) \\ (4s; 1_{i=1}^{n} | n) \end{cases} = \begin{cases} (4s; 1_{i=1}^{n} | n) \\ (4s; 1_{i=1}^{n} | n) \end{cases} = \begin{cases} (4s; 1_{i=1}^{n} | n) \\ (4s; 1_{i=1}^{n} | n)$$

1.4 Ejercicio 4

Two teams A and B play a soccer match. The number of goals scored by Team A is modeled by a Poisson process $N_A(t)$ with rate $\lambda_A=0.02$ goals per minute. The number of goals scored by Team B is modeled by a Poisson process $N_B(t)$ with rate $\lambda_B=0.03$ goals per minute. The two processes are assumed to be independent. Let N(t) be the total number of goals in the game up to and including time t. The game lasts for 90 minutes

- 4. Two teams A and B play a soccer match. The number of goals scored by Team A is modeled by a Poisson process $N_A(t)$ with rate $\lambda_A = 0.02$ goals per minute. The number of goals scored by Team B is modeled by a Poisson process $N_B(t)$ with rate $\lambda_B = 0.03$ goals per minute. The two processes are assumed to be independent. Let N(t) be the total number of goals in the game up to and including time t. The game lasts for 90 minutes.
- (a) Find the probability that no goals are scored.

$$P[N(t)=0]=e^{-\lambda \cdot t} \qquad \text{Ractido} \Rightarrow 90 \text{ mins} \qquad t=90$$

$$P[N(t)=n]=\frac{1}{n!}\cdot \lambda^{n}\cdot t^{n}\cdot e^{-\lambda t} \qquad \lambda_{k}=0.02$$

$$\lambda_{k}=0.03$$

$$P[N_{A}(90)=0]=e^{-0.02\cdot 90}=0.465$$

$$P[N_{A}(90)=0]=e^{-0.03\cdot 90}=0.067$$

$$P[N_{A}(90)=0]=e^{-0.03\cdot 90}=0.067$$

(b) Find the probability that at least two goals are scored in the game

$$P[N_{AB}(90) \ge 2] = 1 - P[N_{AB}(90) \angle 2] = 1 - (P[N_{A}(90) = 0] + P[N_{A}(90) = 1]) = 1 - (e^{-0.05 \cdot L} + \frac{1}{4!} \cdot 0.05^{1} \cdot 90^{1} \cdot e^{-0.05 \cdot 90^{1}}) = 0.9839$$

(c) Find the probability of the final score being Team A:1, Team B:2 $\,$

$$\frac{1}{2!} \cdot 0.03^2 \cdot 90^2 \cdot e^{-0.03 \cdot 90} > 0,0729$$

(d) Find the probability that they draw.

$$P[N_A(q_0) = N_B(q_0)] = \sum_{K=0}^{\infty} P[N_A(q_0) = K] \cdot P[N_B(q_0) = K] = \sum_{A=0}^{\infty} \frac{1}{K!} \cdot 0.02^{K} \cdot L^{K} \cdot e^{-\frac{1}{2}}$$

$$P[N_{A}(90) = N_{B}(90)] = \sum_{K=0}^{\infty} P[N_{A}(90) = K] \cdot P[N_{B}(90) = K] = \sum_{K=0}^{\infty} \frac{1}{K!} \cdot 0.02^{K} \cdot t^{K} \cdot e^{-0.02 \cdot t} \cdot \frac{1}{K!} \cdot 0.03 \cdot t^{K} \cdot e^{-0.02 \cdot t} \cdot \frac{1}{K! \cdot K!} \cdot \frac{2 \cdot \sqrt{0.03 \cdot 0.02 \cdot t}}{(0.03 \cdot 0.02 \cdot t^{2})^{4}} = \sum_{K! \cdot K!} \frac{1}{K! \cdot K!} \cdot \frac{2 \cdot \sqrt{0.03 \cdot 0.02 \cdot t}}{2} = \frac{1}{K! \cdot K!} \cdot \frac{2 \cdot \sqrt{0.03 \cdot 0.02 \cdot t}}{2} = \frac{1}{K! \cdot K!} \cdot \frac{2 \cdot \sqrt{0.03 \cdot 0.02 \cdot t}}{2} = \frac{1}{K! \cdot K!} \cdot \frac{2 \cdot \sqrt{0.03 \cdot 0.02 \cdot t}}{2} = \frac{1}{K! \cdot K!} \cdot \frac{2 \cdot \sqrt{0.03 \cdot 0.02 \cdot t}}{2} = \frac{1}{K! \cdot K!} \cdot \frac{2 \cdot \sqrt{0.03 \cdot 0.02 \cdot t}}{2} = \frac{1}{K! \cdot K!} \cdot \frac{2 \cdot \sqrt{0.03 \cdot 0.02 \cdot t}}{2} = \frac{1}{K! \cdot K!} \cdot \frac{2 \cdot \sqrt{0.03 \cdot 0.02 \cdot t}}{2} = \frac{1}{K! \cdot K!} \cdot \frac{2 \cdot \sqrt{0.03 \cdot 0.02 \cdot t}}{2} = \frac{1}{K! \cdot K!} \cdot \frac{2 \cdot \sqrt{0.03 \cdot 0.02 \cdot t}}{2} = \frac{1}{K! \cdot K!} \cdot \frac{2 \cdot \sqrt{0.03 \cdot 0.02 \cdot t}}{2} = \frac{1}{K! \cdot K!} \cdot \frac{2 \cdot \sqrt{0.03 \cdot 0.02 \cdot t}}{2} = \frac{1}{K! \cdot K!} \cdot \frac{2 \cdot \sqrt{0.03 \cdot 0.02 \cdot t}}{2} = \frac{1}{K! \cdot K!} \cdot \frac{2 \cdot \sqrt{0.03 \cdot 0.02 \cdot t}}{2} = \frac{1}{K! \cdot K!} \cdot \frac{2 \cdot \sqrt{0.03 \cdot 0.02 \cdot t}}{2} = \frac{1}{K! \cdot K!} \cdot \frac{2 \cdot \sqrt{0.03 \cdot 0.02 \cdot t}}{2} = \frac{1}{K! \cdot K!} \cdot \frac{2 \cdot \sqrt{0.03 \cdot 0.02 \cdot t}}{2} = \frac{1}{K! \cdot K!} \cdot \frac{2 \cdot \sqrt{0.03 \cdot 0.02 \cdot t}}{2} = \frac{1}{K! \cdot K!} \cdot \frac{2 \cdot \sqrt{0.03 \cdot 0.02 \cdot t}}{2} = \frac{1}{K! \cdot K!} \cdot \frac{2 \cdot \sqrt{0.03 \cdot 0.02 \cdot t}}{2} = \frac{1}{K! \cdot K!} \cdot \frac{2 \cdot \sqrt{0.03 \cdot 0.02 \cdot t}}{2} = \frac{1}{K! \cdot K!} \cdot \frac{2 \cdot \sqrt{0.03 \cdot 0.02 \cdot t}}{2} = \frac{1}{K! \cdot K!} \cdot \frac{2 \cdot \sqrt{0.03 \cdot 0.02 \cdot t}}{2} = \frac{1}{K! \cdot K!} \cdot \frac{2 \cdot \sqrt{0.03 \cdot 0.02 \cdot t}}{2} = \frac{1}{K! \cdot K!} \cdot \frac{2 \cdot \sqrt{0.03 \cdot 0.02 \cdot t}}{2} = \frac{1}{K! \cdot K!} \cdot \frac{2 \cdot \sqrt{0.03 \cdot 0.02 \cdot t}}{2} = \frac{1}{K! \cdot K!} \cdot \frac{2 \cdot \sqrt{0.03 \cdot 0.02 \cdot t}}{2} = \frac{1}{K! \cdot K!} \cdot \frac{2 \cdot \sqrt{0.03 \cdot 0.02 \cdot t}}{2} = \frac{1}{K! \cdot K!} \cdot \frac{2 \cdot \sqrt{0.03 \cdot 0.02 \cdot t}}{2} = \frac{1}{K! \cdot K!} \cdot \frac{2 \cdot \sqrt{0.03 \cdot 0.02 \cdot t}}{2} = \frac{1}{K! \cdot K!} \cdot \frac{2 \cdot \sqrt{0.03 \cdot 0.02 \cdot t}}{2} = \frac{1}{K! \cdot K!} \cdot \frac{2 \cdot \sqrt{0.03 \cdot 0.02 \cdot t}}{2} = \frac{1}{K! \cdot K!} \cdot \frac{2 \cdot \sqrt{0.03 \cdot 0.02 \cdot t}}{2} = \frac{1}{K! \cdot K!} \cdot \frac{2 \cdot \sqrt{0.03 \cdot 0.02 \cdot t}}{2} = \frac{1}{K! \cdot K!} \cdot \frac{2 \cdot \sqrt{0.03 \cdot 0.02 \cdot t}}{2} = \frac{1}{K! \cdot K!} \cdot \frac{2 \cdot \sqrt{0.03 \cdot 0.02 \cdot t}}{2} = \frac{1}{K! \cdot K!} \cdot \frac{2 \cdot \sqrt{0.03 \cdot 0.02 \cdot t}}{2} = \frac{1}{K! \cdot K!} \cdot \frac{2 \cdot \sqrt{0.03 \cdot 0.02 \cdot t}}{2}$$

```
# 5. B anota primero
if n_B > 0 and (n_A == 0 or goals_B[0] < goals_A[0]):
    B_first_goal += 1</pre>
```

(a) Find the probability that no goals are scored.

Theory value: 0.011

```
[30]: P_no_goals = no_goals / num_simulations
print(f'P(No se marcan goles) = {P_no_goals:.4f}')
```

P(No se marcan goles) = 0.0112

(b) Find the probability that at least two goals are scored in the game.

Theory value: 0.9839

```
[34]: P_at_least_two = at_least_two / num_simulations
print(f'P(at least two goals) = {P_at_least_two}')
```

P(at least two goals) = 0.938796

(c) Find the probability of the final score being Team A:1, Team B:2

Theory value: 0.0729

```
[35]: P_A_1_B_2 = A_1_B_2 / num_simulations 
print(f'P(A:1, B:2) = {P_A_1_B_2:.4f}')
```

P(A:1, B:2) = 0.0730

(d) Find the probability that they draw.

Theory value: 0.1793

```
[36]: P_draws = draws / num_simulations
print(f'P(draw) = {P_draws:.4f}')
```

P(draw) = 0.1800

(e) Find the probability that Team B scores the first goal.

Theory value: 0.5933

```
[37]: P_B_first_goal = B_first_goal / num_simulations
print(f'P(B first goal) = {P_B_first_goal:.4f}')
```

P(B first goal) = 0.5935
